On the VC-311 board

This service manual provides the information that is premised the circuit board replacement service and not intended repair inside the VC-311 board.

Therefore, schematic diagram, printed wiring board, waveforms, mounted parts location and electrical parts list of the VC-311 board are not shown.

The following pages are not shown.

DIGITAL VIDEO CAMERA RECORDER

SPECIFICATIONS

Video camera recorder

System Video recording system 2 rotary heads Helical scanning system Audio recording system Rotary heads, PCM system Quantization: 12 bits (Fs 32 kHz, stereo 1, stereo 2), 16 bits (Fs 48 kHz, stereo) Video signal DCR-TRV19: NTSC colour, EIA standards DCR-TRV12E/TRV14E/TRV19E: PAL colour, CCIR standards Usable cassette Mini DV cassette with the Mini DY mark printed Tape speed SP: Approx. 18.81 mm/s LP: Approx. 12.56 mm/s Recording/playback time (using cassette DVM60) SP: 1 hour LP: 1.5 hours Fastforward/rewind time (using cassette DVM60) Approx. 2 min. and 40 seconds

1) During camera recording using

2) Viewfinder

Operating temperature 0°C to 40°C (32°F to 104°F) Storage temperature $-20^{\circ}\text{C to} + 60^{\circ}\text{C}$ $(-4^{\circ}F \text{ to } + 140^{\circ}F)$ Dimensions (approx.) $71 \times 90 \times 112 \text{ mm}$ $(2.7/8 \times 3.5/8 \times 4.1/2 \text{ in.}) (w/h/d)$ Mass (approx.) Main unit only 520 g (1 lb 2 oz)

Including the rechargeable battery pack NP-FM30, cassette DVM60 and lens cap 610 g (1 lb 5 oz)

Supplied accessories See page 3.

AC Adaptor AC-L15A/L15B

Power requirements 100 - 240 V AC, 50/60 Hz **Current consumption** 0.35 - 0.18 APower consumption 18 W Output voltage DC OUT: 8.4 V, 1.5 A Operating temperature 0°C to 40°C (32°F to 104°F) Storage temperature -20°C to +60°C $(-4^{\circ} \text{F to} + 140^{\circ} \text{F})$ Dimensions (approx.) $56 \times 31 \times 100 \text{ mm}$ $(2\ 1/4 \times 1\ 1/4 \times 4\ in.)\ (w/h/d)$ excluding projecting parts Mass (approx.) 190 g (6.7 oz) excluding power cord

Rechargeable battery pack NP-FM30

Maximum output voltage DC 8.4 V Output voltage DC 7.2 V Capacity 5.0 Wh (700 mAh) Dimensions (approx.) $38.2 \times 20.5 \times 55.6 \text{ mm}$ $(1.9/16 \times 13/16 \times 2.1/4 \text{ in.})$ (w/h/d)Mass (approx.) 65 g (2.3 oz) Operating temperature 0°C to 40°C (32°F to 104°F) Type Lithium ion

Design and specifications are subject to change without notice.

CAUTION:

Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type.

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK A OR DOTTED LINE WITH MARK A ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

ATTENTION AU COMPOSANT AYANT RAPPORT À LA SÉCURITÉ!

LES COMPOSANTS IDENTIFÉS PAR UNE MARQUE A SUR LES DIAGRAMMES SCHÉMATIQUES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈSES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPÉMENTS PUBLIÉS PAR SONY.

SUPPLIED ACCESSORIES

Make sure that the following accessories are supplied with your camcorder.

- 1 AC-L15A/L15B AC Adaptor (1), Power cord (1)
- 2 NP-FM30 rechargeable battery pack
- 3 A/V connecting cable (1)
- 4 Wireless Remote Commander (1) RMT-814E (EXCEPT TRV12E)
- 5 R6 (size AA) battery for Remote Commander (2)
- 6 Shoulder strap (1)
- 7 Lens cap (1)

- 8 Shoe cover (1)
- 9 USB cable (1)
- 10 CD-ROM (USB Driver) (1) SPVD-010 (I), US, CND model only SPVD-010 EXCEPT US, CND model only
- 11 Cleaning cloth (1)
- 12 21-pin adaptor* (1) (AEP, UK, EE, NE model only)
- * The models with () mark printed on their bottom surfaces only.
- 13 2-pin conversion adaptor (1) (E, HK only)

Abbreviation

CND: Canadian model EE : East European model NE : North European model HK : Hong Kong model

SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer.

- Check the area of your repair for unsoldered or poorly-soldered connections. Check the entire board surface for solder splashes and bridges.
- 2. Check the interboard wiring to ensure that no wires are "pinched" or contact high-wattage resistors.
- Look for unauthorized replacement parts, particularly transistors, that were installed during a previous repair. Point them out to the customer and recommend their replacement.
- Look for parts which, through functioning, show obvious signs of deterioration. Point them out to the customer and recommend their replacement.
- Check the B+ voltage to see it is at the values specified.
- Flexible Circuit Board Repairing
 - Keep the temperature of the soldering iron around 270°C during repairing.
 - Do not touch the soldering iron on the same conductor of the circuit board (within 3 times).
 - Be careful not to apply force on the conductor when soldering or unsoldering.

Unleaded solder

Boards requiring use of unleaded solder are printed with the leadfree mark (LF) indicating the solder contains no lead.

(Caution: Some printed circuit boards may not come printed with the lead free mark due to their particular size.)

: LEAD FREE MARK

Unleaded solder has the following characteristics.

• Unleaded solder melts at a temperature about 40°C higher than ordinary solder.

Ordinary soldering irons can be used but the iron tip has to be applied to the solder joint for a slightly longer time.

Soldering irons using a temperature regulator should be set to about 350°C.

Caution: The printed pattern (copper foil) may peel away if the heated tip is applied for too long, so be careful!

Strong viscosity

Unleaded solder is more viscous (sticky, less prone to flow) than ordinary solder so use caution not to let solder bridges occur such as on IC pins, etc.

· Usable with ordinary solder

It is best to use only unleaded solder but unleaded solder may also be added to ordinary solder.

5-2. ELECTRICAL PARTS LIST5-14

Parts list of the VC-311 board are not shown. Pages from 5-21 to 5-24 are not shown.

SECTION 1 SERVICE NOTE

1-1. SERVICE NOTE

1. POWER SUPPLY DURING REPAIRS

In this unit, about 10 seconds after power is supplied to the battery terminal using the regulated power supply (8.4V), the power is shut off so that the unit cannot operate.

This following two methods are available to prevent this. Take note of which to use during repairs.

Method 1.

Use the AC power adaptor (AC-L10, AC-VQ800 etc.).

Method 2.

Connect the servicing remote commander RM-95 (J-6082-053-B) to the LANC jack, and set the commander switch to the "ADJ" side.

2. TO TAKE OUT A CASSETTE WHEN NOT EJECT (FORCE EJECT)

- ① Refer to 2-2 to remove the cabinet (R) cover (39E).
- ② Refer to 2-3 to remove the F panel section.
- 3 Refer to 2-10 to remove the BT panel/EVF section.
- 4 Refer to 2-14 to remove the VA-118 board and Lens section.
- (5) Refer to 2-16 to remove the VC-311 board and Mechanism deck.
- (6) Refer to 2-17 to remove the MD frame assembly from the VC-311 board and Mechanism deck.
- ① Disconnect the flexible board from CN2502 of VC-311 board.
- **3** Supply +4.5V from the DC power supply to the loading motor and unload with a pressing the cassette compartment.

1-2. SELF-DIAGNOSIS FUNCTION

1. SELF-DIAGNOSIS FUNCTION

When problems occur while the unit is operating, the self-diagnosis function starts working, and displays on the viewfinder, or LCD screen what to do. This function consists of two display; self-diagnosis display and service mode display.

Details of the self-diagnosis functions are provided in the Instruction manual.

Viewfinder or LCD screen C:31:1 Blinks at 3.2Hz 3 1 Repaired by: Block Detailed Code Indicates the appropriate C: Corrected by customer Refer to page 1-3. H: Corrected by dealer step to be taken. Self-diagnosis Code Table. E: Corrected by service E.g. engineer 31Reload the tape. 32 Turn on power again.

 $\textbf{Note:} \ \text{The "self-diagnosis display" data will be kept even if the lithium battery (BT5201 of CK-129 board) is removed.}$

When problems occur while the unit is operating, the counter of the viewfinder or LCD screen consists of an alphabet and 4-digit number, which blinks at 3.2Hz. This 5-character display indicates the "repaired by:", "block" in which the problem occurred, and "detailed code" of the problem.

3. SELF-DIAGNOSIS CODE TABLE

S	Self-diagnosis Code		de			
Repaired by:	Blo	-		ailed de	Symptom/State	Correction
C	0	4	0	0	Non-standard battery is used.	Use the info LITHIUM battery.
С	2	1	0	0	Condensation.	Remove the cassette, and insert it again after one hour.
С	2	2	0	0	Video head is dirty.	Clean with the optional cleaning cassette.
С	3	1	1	0	LOAD direction. Loading does not complete within specified time	Load the tape again, and perform operations from the beginning.
С	3	1	1	1	UNLOAD direction. Loading does not complete within specified time	Load the tape again, and perform operations from the beginning.
С	3	1	2	0	T reel side tape slacking when unloading.	Load the tape again, and perform operations from the beginning.
С	3	1	2	1	Winding S reel fault when counting the rest of tape.	Load the tape again, and perform operations from the beginning.
С	3	1	2	2	T reel fault.	Load the tape again, and perform operations from the beginning.
С	3	1	2	3	S reel fault.	Load the tape again, and perform operations from the beginning.
С	3	1	2	4	T reel fault.	Load the tape again, and perform operations from the beginning.
С	3	1	3	0	FG fault when starting capstan.	Load the tape again, and perform operations from the beginning.
С	3	1	4	0	FG fault when starting drum.	Load the tape again, and perform operations from the beginning.
С	3	1	4	2	FG fault during normal drum operations.	Load the tape again, and perform operations from the beginning.
С	3	1	1	0	LOAD direction loading motor time- out.	Remove the battery or power cable, connect, and perform operations from the beginning.
С	3	1	1	1	UNLOAD direction loading motor time-out.	Remove the battery or power cable, connect, and perform operations from the beginning.
С	3	2	2	0	T reel side tape slacking when unloading.	Remove the battery or power cable, connect, and perform operations from the beginning.
С	3	2	2	1	Winding S reel fault when counting the rest of tape.	Remove the battery or power cable, connect, and perform operations from the beginning.
С	3	2	2	2	T reel fault.	Remove the battery or power cable, connect, and perform operations from the beginning.
С	3	2	2	3	S reel fault.	Remove the battery or power cable, connect, and perform operations from the beginning.
С	3	2	2	4	T reel fault.	Remove the battery or power cable, connect, and perform operations from the beginning.
С	3	2	3	0	FG fault when starting capstan.	Remove the battery or power cable, connect, and perform operations from the beginning.
С	3	2	4	0	FG fault when starting drum	Remove the battery or power cable, connect, and perform operations from the beginning.
С	3	2	4	2	FG fault during normal drum operations	Remove the battery or power cable, connect, and perform operations from the beginning.
Е	6	1	0	0	Difficult to adjust focus (Cannot initialize focus.)	Inspect the lens block focus reset sensor (Pin ⑦ of CN1201 of VC-311 board) when focusing is performed when the focus buttons of the touch panel are pressed in the focus manual mode, and the focus motor drive circuit (IC1201 of VC-311 board) when the focusing is not performed.
Е	6	1	1	0	Zoom operations fault (Cannot initialize zoom lens.)	Inspect the lens block zoom reset sensor (Pin ® of CN1201 of VC-311 board) when zooming is performed when the zoom lens is operated and the zoom motor drive circuit (IC1201 of VC-311 board) when zooming is not performed.
Е	6	2	0	0	Steadyshot function does not work well. (With pitch angular velocity sensor output stopped.)	Inspect pitch angular velocity sensor (SE5402 of MA-421 board) peripheral circuits.
Е	6	2	0	1	Steadyshot function does not work well. (With yaw angular velocity sensor output stopped.)	Inspect yaw angular velocity sensor (SE5401 of MA-421 board) peripheral circuits.

SECTION 2 DISASSEMBLY

[SERVICE POSITION TO CHECK THE VTR SECTION]

Connection to Check the VTR Section

To check the VTR section, set the VTR to the "Forced VTR power ON" mode.

Operate the VTR functions using the adjustment remote commander (with the HOLD switch set in the OFF position).

Setting the "Forced VTR Power ON" mode

- 1) Select page: 0, address: 01, and set data: 01.
- 2) Select page: 0, address: 10, and set data: 00.
- Select page: D, address: 10, set data: 02, and press the PAUSE button of the adjustment remote commander.

Exiting the "Forced VTR Power ON" mode

- 1) Select page: 0, address: 01, and set data: 01.
- 2) Select page: 0, address: 10, and set data: 00.
- 3) Select page: D, address: 10, set data: 00, and press the PAUSE button of the adjustment remote commander.
- 4) Select page: 0, address: 01, and set data: 00.

(To eject the cassette, short the circuit between Pin ④ of IC4101 and GND pattern on VA-118 board for 1 second.)

• COMMON NOTE FOR SCHEMATIC DIAGRAMS

WAVEFORMS

THIS NOTE IS COMMON FOR SCHEMATIC DIAGRAMS (In addition to this, the necessary note is printed in each block)

(For schematic diagrams)

- All capacitors are in μF unless otherwise noted. pF: μ μF . 50 V or less are not indicated except for electrolytics and tantalums.
- Chip resistors are 1/10 W unless otherwise noted. $k\Omega$ =1000 Ω , $M\Omega$ =1000 $k\Omega$.
- Caution when replacing chip parts.
 New parts must be attached after removal of chip.
 Be careful not to heat the minus side of tantalum capacitor, Because it is damaged by the heat.
- Some chip part will be indicated as follows.

- Constants of resistors, capacitors, ICs and etc with XX indicate that they are not used.
 - In such cases, the unused circuits may be indicated.
- Parts with * differ according to the model/destination.
 Refer to the mount table for each function.
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
- Signal name

 $X \in DIT \rightarrow EDIT$ PB/XREC $\rightarrow PB/\overline{REC}$

- ---: non flammable resistor
- +w--: fusible resistor
- ____: panel designation
- B+ Line
- ==: B- Line
- IN/OUT direction of (+,-) B LINE.
- adjustment for repair.
- ---: VIDEO SIGNAL (ANALOG)
- - : AUDIO SIGNAL (ANALOG)
- : VIDEO/AUDIO SIGNAL
- VIDEO/AUDIO/SERVO SIGNAL
- ===: SERVO SIGNAL
- · Circled numbers refer to waveforms.

(Measuring conditions voltage and waveform)

- Voltages and waveforms are measured between the measurement points and ground when camera shoots color bar chart of pattern box. They are reference values and reference waveforms.
 - (VOM of DC 10 $M\Omega$ input impedance is used)
- Voltage values change depending upon input impedance of VOM used.)

1. Connection

2. Adjust the distance so that the output waveform of Fig. a and the Fig. b can be obtain.

Fig. a (Video output terminal output waveform)

Fig.b (Picture on monitor TV)

When indicating parts by reference number, please include the board name.

Note

The components identified by mark \triangle or dotted line with mark \triangle are critical for safety. Replace only with part number specified.

Note:

Les composants identifiés par une marque \triangle sont critiques pour la sécurité.

Ne les remplacer que par une pièce portant le numéro spécifié.

Precautions Upon Replaching CCD imager

 The CD-430 board mounted as a repair part is not equipped with a CCD imager.

When replaching this board, remove the CCD imager from the

When replaching this board, remove the CCD imager from the old one and mount it onto the new one.

- If the CCD imager has been replaced, carry out all the adjustments for the camera section.
- As the CCD imager may be damaged by static electricity from its structure, handle it carefully like for the MOS IC.
 In addition, ensure that the receiver is not covered with dusts nor exposed to strog light.

NOTE: Characters A to Z of the electrical parts list indicate location of exploded views in which the desired part is shown.

5. REPAIR PARTS LIST

NOTE:

- -XX, -X mean standardized parts, so they may have some differences from the original one.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- The mechanical parts with no reference number in the exploded views are not supplied.
- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- CAPACITORS:

uF: μF

COILS uH: μH

RESISTORS

All resistors are in ohms.

METAL: metal-film resistor

METAL OXIDE: Metal Oxide-film resistor

F: nonflammable

SEMICONDUCTORS

In each case, u: μ , for example:

 $\begin{array}{l} uA...: \, \mu A... \, , \, uPA... \, , \, \mu PA... \, , \\ uPB... \, , \, \mu PB... \, , \, uPC... \, , \, \mu PC... \, , \end{array}$

uPD..., μPD...

Abbreviation

CND : Canadian model AUS : Australian model EE : East European model NE : North European model

CH: Chinese model KR : Korea model HK: Hong Kong model

When indicating parts by reference number, please include the board name.

The components identified by mark rianlge or dotted line with mark \triangle are critical for safety. Replace only with part number specified.

Les composants identifiés par une marque

Ne les remplacer que par une pièce portant le numéro spécifié.

The components identified by mark \triangle or dotted line with mark ⚠ are critical for safety.

Replace only with part number specified.

Note:

Les composants identifiés par une marque ∆ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

VA-118

DV MECHANICAL ADJUSTMENT MANUAL VII

Ver 1.0 2003. 01

Z MECHANISM

Please use this manual with the service manual of the respective models.

The capstan motor and the drum base block assy of this mechanism require very high precision work to install them in the mechanism. Therefore, the capstan motor and the drum base block assy are not supplied as the repair part independently. They are supplied as MD (Z100) SUB block assy.

Digital MECHANISM DECK

DV MECHANICAL ADJUSTMENT MANUAL VII

1. Preparations for Check, Adjustment and Replacement of Mechanism Block

- Refer to the "DISASSEMBLY" section of the SERVICE MANUAL of the respective models for details of removing cabinets and printed wiring boards.
- When making any adjustment to a mechanism or replacing mechanical parts, be sure to use the Mode Selector II and select the appropriate status of the mechanical deck such that the mechanical status is suitable for the desired work. Refer to section "2-5. Mode Selector II" for details on how to enter the mode shown in a rectangle _____ mode in subsequent paragraphs of this manual.

1-1. Cassette Compartment Assy, Damper Assy

1. Removal procedure

- 1) Set the EJ mode.
- 3) Remove the two screws (special head screw $M1.4 \times 1.4$) ②.
- Remove the LS chassis block assy 3 in the direction of the arrow 0.
- 5) Remove the pin (a) and groove (b) of the cassette compartment assy (4) from the LS chassis groove (a) and pin (b). Then remove the cassette compartment block assy (4).
- 6) Remove the tension spring (POP UP T) (black) **⑤**.
- 7) Remove the tension spring (POP UP S) (silver) **(6)**. Then remove the cassette compartment assy **(7)**.

2. Attachment procedure

- 1) Set the ULE mode.
- 2) Install the tension spring (cassette compartment S) (POP UP S) (silver) (a) in to the cassette compartment assy (7). (The spring should be hooked on the front stay with the spring end facing upward.)
- 3) Install the tension spring (cassette compartment T) (POP UP T) (black) ⑤ in to the cassette compartment assy ⑦. (The spring should be hooked on the front stay with the spring end facing upward.)
- 4) Install the pin (a) and groove (b) of the cassette compartment assy (4) into the LS chassis groove (a) and pin (b).
- 5) In the status that the LS block assy ③ is kept open, insert it into the grooves ① and ④ of the LS chassis block assy.
- 6) Close the LS chassis block assy ③ in the direction opposite to the arrow ⑤, and install it with the two screws (special head screw M1.4×1.4) ②.
 - Tightening torque: 0.059 ± 0.01 N•m $(0.6 \pm 0.1$ kgf•cm)
- 7) The cassette compartment down halfway. Pass the (©) portion of the cassette compartment damper (1) through the groove at the tip of the cassette compartment. Then pull the (C) portion and fix it using tweezers or something.

DV MECHANICAL ADJUSTMENT MANUAL VII

2. Periodic Inspection and Maintenance

Be sure to perform the following maintenance and inspection so
that the machine delivers its full performance and functions, and
to protect the machine and tape. Also, perform the following
maintenance items after completing the repair work, regardless
of the number of hours the machine has been operated by the
user.

2-1. Rotary Drum Cleaning

 Press a wiping cloth (Ref. No. J-2) moistened with cleaning fluid (Ref. No. J-1) lightly against the rotary drum. Rotate the upper drum with a super-fine applicator slowly in the counterclockwise direction to clean the rotary drum.

Caution: Never rotate the rotary drum by turning on the main power of the motor or rotate it in the clockwise direction. Never move the cloth vertically against the head tip, as this will surely damage the video head; the video head must not be cleaned by any other different methods.

2-2. Tape Path System Cleaning (Refer to Fig. 2-1.)

- 1) Set the EJECT state. Clean the tape running path (TG-1, -2, -3, -4, -5, -6 and -7, pinch roller and capstan shaft) and lower drum with a super-fine applicator (Ref. J-3) moistened with cleaning fluid.
- **Note 1:** Be careful not to allow oil or grease of the various link mechanisms to get on the super-fine applicator (Ref. J-3).
- **Note 2:** Once the super-fine applicator has been moistened with alcohol, do not use it to clean other mechanical parts such as the tape guide. However, the pinch roller is cleaned with alcohol.
- **Note 3:** When cleaning the capstan shaft, be carefull not to move the oil seal. If the oil seal is moved, oil will leak.

Fig. 2-1

O: Cleaning, ☆: Check

Note 1: When the machine is overhauled, replace the parts referring to the above list.

Note 2: Grease

- Be sure to use the specified grease only. (If grease of different viscosity is used, it can cause various troubles.)
- The grease must not contain any dust or other matter. (otherwise it can cause various trouble.)
- Observe the noted amount of grease. (otherwise the oozed grease can cause troubles.)
- Suncall FG-87HSR

J-11	Mode Selector II	J-6082-282-B		General adjustment (ROM version 1.8)
J-12	Mode Selector II conversion board (Z)	J-6082-493-A		
J-13	Mode Selector II ROM (supporting Z mechanism) * Note 1	J-6082-314-G		ROM for Mode Selector II

Other required equipment: Oscilloscope

Note 1: This is the ROM used for upgrading the version of Mode Selector II to enable it to be used for the Z mechanism.

DV MECHANICAL ADJUSTMENT MANUAL VII

Fig. 2-2

2-5. Mode Selector II Operating Procedure

2-5-1. Introduction

The Mode Selector II is a mechanism drive tool that assists maintenance work of the various mechanism decks. It has the following functions.

1. Manual Test

In this mode, the motor of the mechanism deck is powered only during the period while the switch is turned on manually. Using the Manual Test, the operator can freely control the motor of the mechanism deck.

2. Step Test

In this mode, the motor of the mechanism deck is kept turned on until the mechanical status is changed from the present mechanical status that is obtained from the sensor information. The Step Test is used to confirm a series of movements of the mechanism deck.

3. Auto Test

The Mode Selector II stores the status transition table in its memory as data indicating the respective modes of the mechanism deck. The status transition table can be used to confirm whether a mechanism deck is operating normally or has abnormality from a series of movements of a mechanism deck. If an abnormal status transition is detected during operation, the "NG" indication appears and the mechanism stops moving.

Fig. 2-3

Mode Selector II (J-6082-282-B) connection diagram

Fig. 2-4

2-5-2. Operation

1. Operation Flow Chart

2. Mode Selector II Power On

Turn on the main power of the Mode Selector II as follows. Press the SEL button.

3. Mode Selector II Power Off

Turn off the main power of the Mode Selector II as follows. Press the RVS and FF buttons at the same time for 2 seconds or longer while the power is on.

DV MECHANICAL ADJUSTMENT MANUAL VII

4. Mecha Select

When the main power is turned on, the MECHA SELECT display appears on the LCD screen. Select the desired mechanism name using the RVS and FF buttons. Selection is complete when the SEL button is pressed. (Fig. A shows the Z mechanism.)

Fig. a

5. Test Type Select

Using the <u>RVS</u> and <u>FF</u> buttons, select a desired test type from the three types of "MANUAL", "STEP" and "AUTO". Selection is complete when the SEL button is pressed.

Fig. b

6. Manual Test

In this test, the motor of the mechanism deck is turned on only during the period while the RVS or FF button is pressed manually.

Fig. c

7. Step Test

In this test, the direction of motor movement is determined by the RVS and FF buttons. The motor of the mechanism deck is kept turned on until the mechanical status is changed from the present mechanical status that is obtained from the sensor information.

Fig. d

8. Auto Test In this test, the mechanism deck is

In this test, the mechanism deck is tested as to whether it performs a series of movements correctly in accordance with the operation sequence that is memorized earlier for each type of deck, by checking the output signals from sensors with the stored memory. Turning on the RVS or FF button performs the same operation.

Fig. e

2-5-3. Mechanism Status (Position) Transition Table Using Mode Selector II

After selecting a mechanism deck, select either the MANUAL or STEP test (not AUTO) using the Mode Selector II. The desired mechanism status (position) can be specified by pressing the RVS or FF button. (The selected status appears on STATUS.) EJ \leftrightarrow ULE \leftrightarrow SR \leftrightarrow HL \leftrightarrow STOP \leftrightarrow R/P

Code	MD	name		Z Mechanism
A	В	С		
0	1	0	1	EJ
1	1	0	2	ULE
1	0	0	3	SR
1	0	1	4	HL
0	0	1	5	STOP
0	1	1	6	R/P

2-5-4. Battery Alarm Indication

When the level of the battery used to supply power to this system decreases, this display appears asynchronously. When this happens, all operations are disabled and the battery must be replaced.

Fig. f

3. Check, Adjustment and Replacement of Mechanical Parts

3-1. Flowchart of Replacement of Mechanical Parts

3-2. Drum

1. Removal procedure

- Remove head drum flexible board © from the notch of the mechanical chassis block assy.
- Remove the drum fixing screw (M1.4 × 1.3) ① and remove the drum assy ②.

2. Attachment procedure

- Ensure that head drum fixible board is hooked on the tape supporter block.
- Hold the tape-supporter block of the drum ② and insert the drum flexible board into the mechanical chassis block assy.
- 3) Insert the two reference holes A and B of the drum into the reference pins A and B of the drum base assy.
- 4) Hook the flexible board © portion on the notch.
- 5) Install the three drum fixing screws (M1.4 × 1.3) ① in the order starting from ②, then ⑤, and finally ⑥. Then tighten the screws.
 - Tightening torque: 0.059 ± 0.01 N•m $(0.6 \pm 0.1$ kgf•cm) Return (\bigcirc 120°, then apply the screw locking paint (Neji lock).
- 6) Clean the drum by referring to section2-1.
- 7) Perform the tape path adjustment. (Refer to "4-4. Tape Path Adjustment".)

3-3. Cassette Compartment Assy

1. Removal procedure

- 1) Set the EJ mode.
- Press the cassette compartment down halfway. Pull the cassette compartment damper ① in the direction of the arrow ②. Then rotate it in the ③ direction, and remove it in the direction of ⑤.
- 3) Remove the two screws (special head screw M1.4 \times 1.4) ②.
- Remove the LS chassis block assy ③ in the direction of the arrow ⑥.
- 5) Remove the pin (E) and groove (F) of the cassette compartment assy (4) from the LS chassis groove (G) and pin (H). Then remove the cassette compartment block assy (4).
- 6) Remove the tension spring (POP UP T) (black) ⑤.
- 7) Remove the tension spring (POP UP S) (silver) **(6)**. Then remove the cassette compartment assy **(7)**.

2. Attachment procedure

- 1) Set the ULE mode.
- 2) Install the tension spring (cassette compartment S) (POP UP S) (silver) **(6)** in to the cassette compartment assy **(7)**. (The spring should be hooked on the front stay with the spring end facing upward.)
- 3) Install the tension spring (cassette compartment T) (POP UP T) (black) ⑤ in to the cassette compartment assy ⑦. (The spring should be hooked on the front stay with the spring end facing upward.)
- 4) Install the pin (E) and groove (F) of the cassette compartment assy (4) into the LS chassis groove (G) and pin (H).
- 5) In the status that the LS block assy ③ is kept open, insert it into the grooves ① and ② of the LS chassis block assy.
- Close the LS chassis block assy ③ in the direction opposite to the arrow ⑥, and install it with the two screws (special head screw M1.4 × 1.4) ②.
 - Tightening torque: 0.059 ± 0.01 N•m $(0.6 \pm 0.1$ kgf•cm)
- 7) The cassette compartment down halfway. Pass the (8) portion of the cassette compartment damper (1) through the groove at the tip of the cassette compartment. Then pull the (1) portion and fix it using tweezers or something.

3-4. TG7 Support

1. Removal procedure

- 1) Remove the screw (special head screw M1.4 \times 6.0) ①.
- 2) Remove the FP-468 flexible board ② from the dowel ④ of the TG7 support.
- 3) Remove the FP-468 flexible board ② from the groove ③ of the TG7 support.
- 4) Remove the TG7 support 3 in the direction of the arrow.

2. Attachment procedure

- 1) Install the FP-468 flexible board ② into the groove ⑧ of TG7 support ③.
- 2) Insert the claw © of the TG7 support ③ into the groove ⑤ of the capstan block, and fix it while aligning with the dowel ⑤.
- 3) Align the round hole of the FP-468 flexible board ② with the dowel ③ of the TG7 support ③.
- 4) Install the screw (special head screw M1.4 \times 6.0) ①. Tightening torque: 0.059 ± 0.01 N•m (0.6 ± 0.1 kgf•cm)

Points to be noted

• Be careful not to damage the FP-468 flexible board.

3-5. Motor Holder Block Assy and L Motor Block Assy

1. Removal procedure

- Remove soldering at the two locations ①, and remove the FP-467 flexible board from the motor holder block assy (loading)
 ③.
- 2) Remove the screw (special head screw $M1.4 \times 2.0$) ②.
- 3) Remove the motor holder block assy (loading) ③ by pulling it off from the claw ④.
- 4) Release the three claws (B) and remove the motor shield (4).
- 5) Remove the deceleration gear **5**.
- 6) Release the claw © and remove the worm shaft 6.

- Confirm the direction of the L motor block assy ⑦. Align the dowels ⑤ then install into the motor holder. (Insert the motor worm so that the motor worm does not touch the motor holder, and fix it with two claws ⑥.
- 2) Engage the three claws (B) and install the motor shield.
- Apply 2.0 g of grease (at 2 locations) to the bottom (F) of the motor holder.
- 4) Install the worm shaft **6** from the worm side and set the claw.
- 5) Install the reduction gear **⑤**.
- 6) Engage the claw (A) and align the two dowels (G). Then install the motor holder block assy (loading) (3) in the mechanical chassis block. Install the screw (special head screw M1.4 \times 2.0) (2).
 - Tightening torque: 0.059 ± 0.01 N•m $(0.6 \pm 0.1$ kgf•cm)
- 7) Make soldering at the two locations ①. Install the motor holder block assy (loading) ③ into the FP-467 flexible board ④.

3-6. MIC Terminal (MIC902)

1. Removal procedure

- 1) Remove soldering at the five locations (a), and remove the FP-467 flexible board (1) from the MIC terminal (MIC902) (3).
- 2) Remove the screw (special head screw M1.4 \times 2.0) ② and remove the MIC terminal (MIC902) ③.

- 1) While pressing the top of the MIC terminal (MIC902) ③, tighten the two screws (special head screw M1.4 × 2.0) ② in the order of ⑧ then ⑥.
- Tightening torque: 0.059 ± 0.01 N•m $(0.6 \pm 0.1$ kgf•cm)
- 2) Make soldering at the five locations (a), and connect the FP-468 flexible board (1) into the MIC terminal (MIC902).

3-7. LED (D901)

1. Removal procedure

- 1) Remove LED (D901) and the FP-468 flexible board ① from the retainer plate.
- Remove soldering at the two locations (A) and remove LED (D901) (2).

- Install the LED (D901) ② to the FP-468 flexible board by making soldering at the two locations ③.
- 2) Fold the FP-468 flexible board ① beneath the LED (D901) with finger tip so that it is inserted into the ® portion of the retainer plate.

3-8. Retainer Plate

Removal procedure

- 1) Remove LED ① from the retainer plate.
- 2) Remove the two screws (special head screw $M1.4 \times 2.0$) ②.
- 3) Release the three claws **B**, **C** and **D**, and remove the retainer plate **3** in the direction of the arrow mark **E**.
- 4) Release the claw (A) and remove the reel lock release (4).

2. Attachment procedure

- 1) Install the reel lock release 4.
- Place the retainer plate ③ on top of the LS chassis block assy and engage the three claws in the order starting from ⑤, ⑥ and ⑥.
- 3) Install the two screws (special head screw M1.4 × 2.0) ② in the order starting from ① then ③.

 Tightening torque: 0.059 ± 0.01N•m (0.6 ± 0.1kgf•cm)
- 4) Install LED ① to the retainer plate.

REEL LOCK RELEASE

Key Points in Re-assembling

- The reel lock release should not be re-used.
- The retainer plate must not have any deformation.
- The reel lock release should be fully installed. (Should not be left in the half-installed state.)

RETAINER PLATE

Key Points in Re-assembling

- All claws must be fully engaged. (Caution : No claws should be left disengaged.)
- The flexible board should not be pinched by anything.
- The retainer plate must not touch with the MIC terminal.

3-9. T Reel Table Assy

1. Removal procedure

1) Remove the T reel table assy ①, averting three claws ②.

2. Attachment procedure

1) Confirm that the supplied part is really the T reel table assy ①. Insert the T reel table assy ① into the T reel shaft. Install the T reel table assy ① and lock it at the position where you can hear the snapping sound. You can find the locking position by rotating the T reel table assy ①.

3-10. Brake (S) and Release Rack (S)

1. Removal procedure

- 1) Remove the brake (S) ①.
- 2) Remove the tension spring (release rack (S)) ②.
- 3) Remove the release rack (S) ③.

- Remove the release rack (S) ③ by holding it with a ultra precision tweezers. Install the tension spring (release rack) ② while being careful of the installation direction of the tension spring.
- Hook the tension spring (release rack) ② on the hook of the cassette positioning (S), and then install it in the ULE brake assy.
- 3) Insert the slot (B) in the dowel (A) of the release rack (S) (3). Insert the round hole (C) into the pivot shaft (D) and install the brake (S) (1).
 - (Installation direction: Claw should be positioned in the reel table side.)

3-11. Band Adjuster, S Reel Table Assy and TG2 Arm Block Assy

1. Removal procedure

- 1) Remove the screw (special head screw M1.4 \times 2.5) ①.
- Remove the band of the TG2 arm block and remove the band adjuster
- 3) Remove the S reel table assy 3.
- 4) Remove the tension spring (tension regulator spring) **(4)**.
- 5) Remove the TG2 arm block assy **⑤**.

- 1) Install the S reel table assy ③.
- Apply grease in the TG2 arm pivot shaft (B).
 Amount of grease: a ball of 1.0 mm diameter of grease
 Re-application of grease to the point which is greased already before is not necessary.
- 3) Hold the TG2 arm block assy (§) with tweezers and insert it in the TG2 arm pivot shaft (§).
- Hook the tension spring (tension regulator spring) (4) on the TG2 arm block (5) with tweezers so that the hook faces downward.
- 5) Hook the tension spring (tension regulator spring) ④ on the LS chassis block assy (the second hook from the rear end).
- Hook the portion of the band on the claw of the band adjuster
 .
- 7) Hold the band adjuster with tweezers as shown in ©. Insert the band into groove of the S reel table assy while rotating it, and insert the adjuster's dowel into the dowel hole ① of the LS chassis block assy.
- 8) Install the band adjuster ② with the screw (special head screw M1.4 × 2.5) ①.
 Tightening torque: 0.059 ± 0.01N•m (0.6 ± 0.1kgf•cm)
- Perform the TG2 FWD Position Adjustment referring to section
 4-1
- 10) Perform the FWD Back-tension Adjustment referring to section 4-4
- 11) Perform the Reel Torque Check referring to section 4-2.

3-12.ULE Brake Assy

1. Removal procedure

- Remove the tension spring (ULE brake) ① from the ULE brake assy ②.
- 2) Slide the LS chassis block assy slightly in the direction of the arrow **(E)**.
- 3) Slant the ULE brake assy ② in the direction of the arrow ⓐ and remove it by sliding it in the direction of ⑧.

- Confirm the front side and the rear side of the ULE brake assy
 Hold it correctly with tweezers. Insert the portion © into the hole
 of the LS chassis block assy and install the center hole in the
 of the chassis.
- 2) Install the tension spring (ULE brake assy) ①.

3-13. Cassette Positioning (S)

1. Removal procedure

- Remove the tention spring (ULE brake) ② from the hook ® of ULE brake assy.
- Slide the cassette positioning (S), then remove the cassette positioning (S) and tension spring (ULE brake) (1) all together at the same time.
- 3) Remove the tension spring (ULE brake) ② from the cassette positioning (S) ③.

2. Attachment procedure

- 1) Hook the tension spring (ULE brake) ② on the cassette positioning (S) ③ with tweezers.
- 2) Hold the cassette positioning (S) ③ with tweezers and insert the top tip of the claw into the LS chassis block assy ④. Lock it by sliding it in.
- 3) Install the other end of the tension spring (ULE brake) ② on the hook ⑧.

CASSETTE POSITIONING (S)

3-14.TG7 Arm Block Assy and Pinch Arm Assy

Removal procedure 1.

- Remove the TG7 arm block assy ①. 1)
- Rotate the pinch arm assy 2 in the direction of the arrow A and remove it.
- Remove the torsion spring (pinch return) 3.

- Hold the torsion spring (pinch return) ③ with tweezers. Confirm that the hook faces upward and install it in the bearing.
- Hold the pinch arm assy ② as shown in ⑤ and install it in the pinch arm bearing.
- Hold the torsion coil spring (pinch return) 3 with tweezers and install it as shown in **E**.
- Apply grease on the supporting surface of the TG7 pivot shaft. Amount of grease: a ball of grease of 0.5 mm diamte Re-application of grease to the point which is greased already before is not necessary.
- 5) Hold the TG7 arm block assy ① as shown in ® and insert it in the pivot shaft of the TG7 arm.
- Hold the torsion spring (pinch return) 3 with tweezers and install it on the hook of the TG7 arm block assy ① as shown in
- Confirm that the torsion spring (pinch return) 3 does not override on the pinch supporting shaft.

3-15.TG7

Removal procedure

- Remove the TG7 nut ① by turning it in the direction of the arrow.
- 2) Remove the TG7 ② and compression coil spring ③ from the TG7 arm block assy.

- 1) Install the compression coil spring ③ and TG7 ② in the TG7 shaft of the TG7 arm block assy.
- 2) Install the TG7 nut ① by turning it in the opposite direction of the arrow.

3-16. Gooseneck Gear Assy

1. Removal procedure

- Move the LS chassis block assy ① in the direction of the arrow
 to make it in YJ position.
 - YJ position: The position (B) where gooseneck gear assy can be removed. (where the center of LS chassis hole matches with junction gear shaft.)
- 2) Remove the gooseneck gear assy, holding it with ©.

- 2) Install the gooseneck gear assy, holding it with © in the gooseneck gear shaft.
- 3) Move it closer to the S reel.

3-17.LS Guide Retainer and LS Cam Plate

1. Removal procedure

- 1) Remove the screw (special head screw $M1.4 \times 2.0$) ①. and remove the LS guide retainer ②.
- 2) Remove the screw (special head screw M1.4 \times 1.4) 3 and remove the LS cam plate 4.

2. Attachment procedure

- Hold the LS cam plate with (a) and place it aligning the two dowels. Tighten the screw (special head screw M1.4 × 1.4) (3) in half way.
- 2) Adjust the LS cam plate by referring to section 4-5.
- 3) Hold the LS guide retainer ② with ③ and hook its key hole ⑥ on the S2 shaft, and align the hole ⑥ to S1 screw hole.
- 4) Install the screw (special head screw M1.4 \times 2.0) ① in the S1 screw hole.

Tightening torque: 0.059 ± 0.01 N•m $(0.6 \pm 0.1$ kgf•cm)

LS GUIDE RETAINER

3-18.LS Chassis Block Assy and Mechanical Chassis Block Assy

1. Removal procedure

- Remove soldering at the eight locations ①.
- Release the claw (A) and remove the FP-468 flexible board (2) 2) from the mechanical chassis block assy in the direction of the arrow **B**.
- Raise the front portion of the LS chassis block assy 3 so that the pin © of the LS arm assy is removed. Move the LS chassis block assy 3 in the direction of the arrow D and release the three pins of **E**, **F** and **G**, and also groove.
- Remove the LS chassis block 4 from the mechanical chassis block assy.

- Apply grease to the GL drive arm ① portion and mechanism chassis block L.
 - Amount of grease: a ball of grease of 1.0 mm diameter
- Rotate the T reel table assy in the counter-clockwise direction and move the brake T block to the position shown in Fig. 1. (Fig. 1)
- Move the TG2 arm block to the inner side. (Fig. 2)
- Hold the cam groove of the GL driving arm with tweezers through LS chassis hole (K) and pick it up.
- Insert the GL drive shaft into the cam groove of the raised GL drive arm using the trace mark of caulking on the side of the S reel of the LS chassis block assy. (Fig. 3)
- Align the pins **(E)**, **(F)** and **(G)** with the grooves.
- Align the left side S1 screw hole and S2 shaft with the goove H) of the LS chassis block assy.
- ① so that the YJ position is obtained.
- Align the claw (A) and install the FL-468 flexible board (2) in
- 10) Connect the soldering at the eight locations ① and install the

3-19. Brake (T) Block Assy

1. Removal procedure

2. Attachment procedure

- 2) After completing installation of T reel table assy (Refer to 3-9.), rotate the brake (T) block assy ① in the clockwise direction by rotating T reel talbe assy in the counter-clockwise direction. (Fig. 1)

BRAKE (T) BLOCK ASSY

3-20. END Sensor (Q901)

1. Removal procedure

- 1) Peel off the sensor S cover ①.
- Release the claw (A) of the sensor holder (S) (3). Remove it from the LS chassis block assy by sliding it in the direction of the arrow (B).
- 3) Remove soldering at the two locations and remove the END sensor (Q901) ② and the sensor holder (S) ①.

- Connect the END sensor (Q901) ② and the sensor holder (S)
 3 to the FP-468 flexible board by soldering them at the two locations B.
- 2) Slide the END sensor (Q901) ② and the sensor holder (S) ③ in the direction of the arrow ⑥ to install them in the LS chassis block assy.
- 3) Hook the flexible board on the end of the **(D)** portion.
- 4) Attach the sensor S cover ①.

3-21.TOP Sensor (Q902)

1. Removal procedure

- 1) Peel off the MNO seal ①.
- Release the two claws of the sensor holder (T) ② at the two locations ③. Remove it from the LS chassis block assy by sliding it in the direction of the arrow ⑤.
- 3) Remove the soldering at the two locations (B) and remove the TOP sensor (Q902) (3) and the sensor holder (T) (4).

- Connect the TOP sensor (Q902) 3 and the sensor holder (T)
 to the FP-468 flexible board by soldering them at the two locations 8.
- 2) Engage the two claws (A) to install the TOP sensor (Q902) (3) and the sensor holder (T) (4) in the LS chassis block assy.
- 3) Attach the MNO seal ①.

3-22. C-IN Switch (S903), S Reel Sensor (H901) and T Reel Sensor (H902)

1. Removal procedure

- Remove soldering at the two locations (A) and remove the C-IN switch (S903) (1).
- 2) Remove soldering at the four locations (B) and remove the T reel sensor (H902) (2).
- 3) Remove soldering at the four locations (B) and remove the S reel sensor (H901) (3).

- 1) Connect the S reel sensor (H901) ③ to the FP-468 flexible board by soldering it at the four locations ⑤.
- 2) Connect the T reel sensor (H902) ② to the FP-468 flexible board by soldering it at the four locations ③.
- Align the two dowels **(D)** and connect the C-IN switch (S903) **(1)** to the FP-468 flexible board by soldering it at the two locations **(A)**.

3-23. Guide Rail

1. Removal procedure

- 1) Remove the screw (special head screw M1.4 \times 2.0) ①.
- 2) Remove the guide rail ② in the direction of the arrow.

- 1) Hold the center of the guide rail ②. While pressing the TG2 cam plate assy, insert the four claws ④ of the guide rail in a slant angle from the top into the drum base's groove ③. (Insert the top tip of the rail at the same time.) Confirm at this time that the two claws of the TG cam plate assy have entered in the claw ⑤ of the guide rail.
- Insert the two claws (E) of the T side guide rail into the groove (F) of the drum base.
- 3) Tighten the screw (special head screw M1.4 × 2.0) ①. Tightening torque: 0.059 ± 0.01N•m (0.6 ± 0.1kgf•cm)

3-24. Conversion Gear

1. Removal procedure

- 1) Remove the belt ① from the conversion gear.
- 2) Remove the conversion gear ② from the conversion gear shaft.

- Apply grease to the conversion gear shaft.
 Amount of grease: a ball of grease of 1.0 mm diameter
- 2) Install the conversion gear ② in the conversion gear shaft.
- 3) Hook the belt ① on the conversion gear in a slant angle and install it by rotating the conversion gear with fingertip.

3-25. Coaster (S) Block Assy and Coaster (T) Block Assy

1. Removal procedure

- Remove the coaster (T) block assy ① from the coaster (T) block shaft. Remove the coaster (T) block assy from the right groove of the drum base.
- Remove the coaster (S) block assy ② from the coaster (S) block shaft. Remove the coaster (S) block assy from the left groove of the drum base.
- 3) Remove coaster (S) assy ③ by rotating it through the key hole of GL (S) assy ④.

- Install the coaster (S) assy 3 into the key hole of the GL (S) assy 4 by rotating it.
- 2) Insert the coaster (S) block assy ② into the coaster (S) block shaft. While aligning it with the left groove of the drum base, push it in the way that the V-groove comes to the top until it reaches the pressure-bearing S.
- 3) Push in the coaster (T) block assy ① along with the right groove of the drum base. Align the phase of the GL gear S, GL gear T and the GL drive arm at the three phasing locations. Then install the coaster (T) block assy ① in the coaster (T) block assy shaft.

3-26.TG5 Roller Assy and GL Gear (T)

1. Removal procedure

- Rotate the TG5 roller assy ① in the direction of the arrow and remove the TG5 roller assy ① and the TG5 spring ② from the coaster (T) assy.
- 2) Release the claw (A) and remove the GL gear (T) ③ and the torsion coil spring (GLT) ④ from the coaster (T) assy.

- Install the GL gear (T) (3) and the torsion coil spring (GLT) (4) into the coaster (T) assy.
- 2) Install the TG5 spring ② into the coaster (T) assy.
- 3) Install the TG5 roller assy ① into the coaster (T) assy by rotating it in the direction opposite to the arrow.

3-27.TG2 Cam Plate Assy

1. Removal procedure

- 1) Remove the LS guide roller (S1) ① from the S1 shaft.
- 2) Remove the LS guide roller (S2) ② from the S2 shaft.
- 3) Release the claw (A) of the TG2 cam plate assy (3) from the right groove (B) of the mechanical chassis.
- Remove the TG2 cam plate assy ③ in the direction of the arrow
 ©

- 1) Move the brake driving arm of the TG2 cam plate assy ③ in the direction of the arrow ⑥.
- 2) Insert the right claw (A) of the TG2 cam plate assy (3) into the right groove (B) of the mechanical chassis first.
- 3) Install the two round holes **(E)** of the TG2 cam plate assy **(3)** into the S1 shaft and the S2 shaft.
- 4) Apply grease in the **(F)** portion of the TG2 cam plate assy. Amount of grease: a ball of 1.0 mm diameter of grease
- 5) Apply grease to both sides of the S1 shaft and the S2 shaft. Amount of grease: a ball of 1.0 mm diameter of grease
- 6) Apply grease to both sides of the LS guide roller S1, S2.
- 7) Install the LS guide roller S1 ① in the S1 shaft.
- 8) Install the LS guide roller S2 ② in the S2 shaft.

3-28.LS Arm Assy

1. Removal procedure

- 1) Remove the LS arm assy ① from the LS guide S1 shaft.
- 2) Turn over the LS arm assy and remove the LS roller ②.

- 1) Apply grease to the LS arm shaft **(A)** (on the side).
- 2) Install the LS roller ② into the LS arm shaft.
- 3) Turn over the LS arm assy ① and install it while matching the phase of the LS guide shaft S1 and the cam gear groove.
- 4) Apply grease to the LS arm shaft (B) (on its side).

3-29.M Slider Assy (1)

1. Removal procedure

- 1) Remove an end of the tension spring (pinch) ① from the round hole of the M slider.
- 2) Remove another end of the tension spring (pinch) ① from the pinch driving arm ②.
- 3) Rotate the rotary encoder in the direction of the arrow (€), and align the ▲ mark of ratary encoder with the tooth bottom between second and third teeth (€). Move by hand in the direction of the arrow (♠) until the cam gear shaft and M slider shaft match with the shaft hole of the M slider assy (③).
- Push in the direction of the arrow (B) until the GL driving arm
 gets in contact with the conversion gear shaft.

(to be continued to next items 5) through 7) on next page)

2. Attachment procedure

(continued from the previous items 1) through 5) on next page)

- Move the conversion gear shaft in the direction opposite tot he arrow mark (B) as far as it can go.
- 7) Rotate the rotary encoder in the direction of the arrow © until the ▲ mark arrives at the position ①.
- Install an end of the tension coil spring (pinch) ① on the pinch driving arm ② (in the way that spring hook faces upward).
- 9) Install another end of the tension coil spring (pinch) ① on the round hole of the M slider (in the way that spring hook faces upward).

3-30.M Slider Assy (2)

1. Removal procedure

(continued from the previous items 1) through 5) on previous page)

- 5) Remove the cam gear shaft and the M slider shaft from the two shaft holes (a) of the M slider assy (1).
- 6) Remove the top tip (B) of the M slider assy (1) from the notch of the mechanical chassis in the direction of the arrow.
- 7) Remove the M slider assy ①.

2. Attachment procedure

- Apply grease to the cam gear shaft and the M slider shaft (neck groove of the shaft where the M slider slides).
 Amount of grease: a ball of 1.0 mm diameter of grease
- Align the hole of the pinch driving arm and the hole of the mechanical chassis.
- Align the ▲ mark of rotary encoder with the tooth bottom between second and third teeth €.
- 5) Install the cam gear shaft and the M slider shaft into the tow shaft holes (a) of the M slider assy.

(to be continued to next items 6) through 9) on previous page)

3-31.EJ Arm

1. Removal procedure

- 2) Remove the EJ arm and the tension coil spring (EJ arm) ② all together in the direction of the arrow.
- 3) Remove the tension coil spring (EJ arm) ③ from the EJ arm ④.

- 1) Install the tension coil spring (EJ arm) ③ into the round hole of the EJ arm ④ with the hook facing upward.
- 3) Insert he tension coil spring ① into the round hole ② of the mechanical chassis with the hook facing upward.

3-32. Cam Gear and GL Driving

1. Removal procedure

- 1) Rotate the GL driving arm (1) block assy in the direction of the arrow (1) until it contacts with the conversion gear shaft.
- 2) Remove the cam gear ②.
- 3) Remove the GL driving arm ③.

- Insert the GL driving arm ③ into the shaft ④ of the mechanical chassis and rotate the GL driving arm ⑪ block assy in the direction of the arrow ① until it contacts with the conversion gear shaft.
- 2) Confirm the front side and rear side of the cam gear ② so that the correct side is selected. Install the cam gear ② while matching phase of the ▲ mark ③ with the second tooth valley ⑥ and the third tooth valley ⑥ of the cam gear.
- Apply grease to the specified locations (A) to (G) of the cam gear.

3-33. Rotary Encoder (\$902)

1. Removal procedure

- 1) Remove the three claws (a) of the rotary encoder (S902) (1) from the three notches of the mechanical chassis.
- Rotate the rotary encoder (S902) 1 in the direction of the arrowand remove.
- Remove soldering (at the four locations) © to which the rotary encoder (S902) is attached.

- Make soldering (at the four locations) © so that the rotary encoder (S902) ① is connected to the FP-467 flexible board.
- 2) Place the rotary encoder (S902) ① on top of the notch ② of the mechanical chassis. Lock the three claws ③ of the rotary encoder (S902) ① into the notches ③ of the mechanical chassis.
- Match the phase of the ▲ mark (E) of the rotary encoder (S902) (1) with the phase of the round hole (F) of the mechanical chassis.

3-34.FP-228 Flexible Board (DEW SENSOR) and FP-467 Flexible Board

1. Removal procedure

- 1) Remove the soldering at the two locations ① and remove the FP-228 flexible board (DEW SENSOR) ②.
- Remove the FP-467 flexible board 3 from the mechanical chassis in the direction of the arrow.

- Match the phase of the two holes (A) of the FP-467 flexible board (3) with the holes of the mechanical chassis, and attach them each other.
- 2) Attach the FP-228 flexible board (DEW SENSOR) ② to the FP-467 flexible board ③.
- 3) Connect the terminals at the two locations ① by soldering.

2003.01.30

HELP

Application of grease, soldering method and precautions, and phase matching adjustment are compiled and below.

Apply grease (2)

Soldering (1)

Lead-free solder

Wire type : Ø0.6
Temperature of the : 320 °C

soldering iron tip Contacting time of soldering iron tip : within 2 sec.

• Be careful not to create the hollow soldering, Br, and there must be no lacking of parts.

• Be careful not to melt the detent

of the holder.

Be careful not to melt the END cover.

• Be careful not to break the terminals due to attaching the soldering iron too long time.

FP-468 flexible board MIC terminal (MIC902) Five solderings

Use the rubber finger tip cover

Lead-free solder

Wire type :Ø0.6

: 941 made by Hakko Soldering iron

:T1-1BC Soldering iron tip

Temperature of the

:300 ±10 °C soldering iron tip

Contacting time of

: within 2 sec soldering iron tip

Wire type: diameter 0.6 Ø
Temperature of the soldering iron tip: 350 °C
Contacting time of soldering iron tip: within 2 sec.

• Be careful not to create the

hollow soldering, Br,

and there must be no lacking of parts.

• Be careful not to crash the grip jog to the TG1 guide.

Soldering (3)

Matching Phase

4. Adjustment

4-1. FWD Position Adjustment

When the TG2 arm block assy or the band adjuster or the S reel table assy is replaced or removed, the following adjustment becomes necessary.

- TG2 FWD Position Adjustment (Refer to section 4-4.)
- FWD Back Tension Adjustment (Refer to section 4-4.)
- Reel Table (RVS) Check (Refer to section 4-2.)
- 1) Set the R/P mode and check the TG2 guide position as follows.
 - Confirm that the distance between the TG2 guide and the L motor is 1.0 mm. If not, perform adjustment as follows.
- 2) Loosen the fixing screw. Use the adjustment screwdriver (Ref No. J-8) and adjust the band adjuster for the distance of 1.0 mm between the TG2 guide and the L motor. Upon completion of adjustment, tighten the fixing screw securely as follows. Tightening torque: 0.059 ± 0.01 N•m (0.6 ± 0.1 kgf•cm)

Note: Upon completion of adjustment, confirm that TG2 can move with some margin in the direction of the arrow a.

4-2. Reel Torque Check

1. Check Procedure

[FWD torque]

- 1) Set the mini DV torque cassette (Ref. No. J-6).
- Establish the FWD mode. Confirm that the center value of the T reel table torque value is in the range of 0.49 to 0.93 (mN•m) (5.0 to 9.5 g•cm) within deviation of 0.39 (mN•m) (4.0 g•cm)

[RVS torque]

- 1) Set the mini DV torque cassette (Ref. No. J-6).
- Establish the RVS mode. Confirm that the center value of the S reel table torque value is in the range of 1.57 to 2.45 (mN•m) (16.0 to 25.0 g•cm)

If the above specification is not satisfied, check the tension regulator band for correct operation. If operation of the tension regulator band has no problem, replace the respective reel tables.

Fig. 4-1

4-3. LS Cam Plate Position Adjustment

1. Adjustment Procedure

- 1) Loosen the LS cam plate fixing screw (special head screw $M1.4 \times 1.4$) by 180 degrees.
- 2) Set the STOP mode.
- 3) While pressing the center of the LS chassis block with the force of 1.5 ± 0.5 N (150 gf \pm 50 gf), move the LS cam plate toward the S reel side with the force of 0.147 ± 0.01 N•m (2300 gf \pm 200 gf) and tighten the LS cam plate fixing screw (special head screw M1.4 \times 1.4) ①.

Tightening torque: $0.098 \pm 0.01 \text{ N} \cdot \text{m} (1.0 \pm 0.1 \text{ kgf} \cdot \text{cm})$

Fig. 4-2

4-4. Tape Path Adjustment

4-1. Adjustment Preparation

- 1) Clean the tape running surface (tape guides, drum, capstan, pinch roller) referring to section 2-2.
- Connect the adjustment remote commander (Ref. No. J-13) to the LANC terminal of the machine. Set the HOLD switch to ON.
- 3) Connect an oscilloscope to CN1004 of the VC-312 board via the CPC-7 jig (J-6082-382-A). (In the case of DCR-TRV22K) Oscilloscope CH1: VC-312 board CN1004 pin② (Note 1) EXT. TRIG: VC-312 board CN1004 pin④
 - **Note 1:** Connect CN1004 pin② and pin⑥ (GND) with a 75-ohm resistor (1-247-804-11).
- 4) Play back the tracking alignment tape (XH 2-1) (Ref. No. J-5).
- 5) Select page: 0, address: 10 and set data: 00. (Note 2)
- Select page: 3, address: 26 and set data: 31, and press the PAUSE button. (Note 2)
- 7) Select page: 3, address: 33 and set data: 08. (Note 2)
- 8) Confirm that the RF waveform on the scope is flat at both of the entrance side and the exit side. (Refer to Fig. 4-4A.) If the RF waveform is not flat either at the entrance side or the exit side (refer to Fig. 4-4 B and C), perform the adjustment of section 6-2 and later.
- 9) When the required conditions of step 8) are satisfied, perform [Required Work upon Completion of Adjustment] as described below upon completion of adjustment/check.

[Required Work upon Completion of Adjustment]

- Connect the adjustment remote commander (Ref. No. J-13) to the LANC terminal of the machine. Set the HOLD switch to ON.
- 2) Select page: 0, address: 10 and set data: 00. (Note 2)
- 3) Select page: 3, address: 26 and set data: 00, and press the PAUSE button. (Note 2)
- 4) Select page: 3, address: 33 and set data: 00. (Note 2)

Note 2: Page and address numbers differ depending on each model. Please to Service Manual of the respective models. Page and address numbers of DCR-TRV22K are shown in this manual.

Fig. 4-3

Fig. 4-4

Fig. 4-5

4-2. TG3/TG5 Guide Coarse Adjustment

- 1) Play back the tracking alignment tape (XH 2-1) (Ref. No. J-5).
- 2) Adjust the TG3 and TG5 guides until the RF envelope waveform becomes flat. (Refer to Fig. 4-8.)

Fig. 4-6

4-3. FWD Back Tension Adjustment

- 1) Set the mini DV torque cassette (Ref. No. J-6) and establish the FWD mode.
- 2) Confirm that the S side torque cassette reading value is in the range of 0.2 to 0.3 mN•m (2.0 to 3.0 g•cm) including deviation. If the measurement value does not satisfy the specifications, perform the following adjustment.
 - If the measurement value is higher than the specification: (Decreases the spring tension)
 Move the tension coil spring hook to another spring stay in the direction of (B).
 - If the measurement value is lower than the specification: (Increases the spring tension)
 Move the tension coil spring hook to another spring stay in the direction of (A).

Fig. 4-7

4-4. TG3/TG5 Guide Fine Adjustment

- 1) Play back the tracking alignment tape (XH 2-1) (Ref. No. J-5).
- Adjust the TG3 so that the RF envelope has the larger amplitude at the entrance side first, than adjust TG3 guide for flat amplitude. (Refer to Fig. 4-8.)
- Adjust the TG5 so that the RF envelope has the larger amplitude at the exit side first, than adjust TG5 guide for flat amplitude. (Refer to Fig. 4-9.)

Fig. 4-8

Fig. 4-9

4-5. Tape Run Check

Play back the tracking alignment tape (XH 2-1) (Ref. No. J-5).
 Establish the CUE mode first then the REV mode. Confirm in the respective modes that there are no large tape curls at the upper flange of TG3 and TG5. Then confirm in the respective modes that there are no large tape curls at the upper and lower flanges of TG1 and TG7.

Fig. 4-10

4-6. Check upon Completion of Adjustment

1. Tracking Check

- 1) Play back the tracking alignment tape (XH 2-1) (Ref. No. J-5).
- Establish the CUE (or REV) mode. Take the amplitude (A) in this mode as the 100% waveform amplitude. (Refer to Fig. 4-11.)
- Establish the FWD mode. Confirm that the difference between the minimum (E min) and the maximum (E max) is less than 30%. (When taking the amplitude (A) in the CUE or REV mode as 100%)

Fig. 4-11

4) Confirm that the RF waveform does not have excessive fluctuation of amplitude. (Fluctuation of amplitude should be 10% or less at both entrance side (B) and exit side (C), when taking the amplitude (A) in the CUE or REV mode as 100%)

Fig. 4-12

DV MECHANICAL ADJUSTMENT MANUAL VII

2. CUE/REV Check

- 1) Play back the tracking alignment tape (XH 2-1) (Ref. No. J-5).
- 2) Establish the CUE mode. Confirm that the pitches between the peaks of the RF waveform are equally spaced. Also confirm that the RF waveform amplitude at entrance side (B) and exit side (C) is 50% or more respectively, when taking the amplitude (A) in the CUE or REV mode as 100%.
- 3) Establish the REV mode. Confirm that the pitches between the peaks of the RF waveform are equally spaced. Also confirm that the RF waveform amplitude at entrance side (B) and exit side (C) is 50% or more respectively.

Fig. 4-13

3. Rise-up Check

- 1) Play back the tracking alignment tape (XH 2-1) (Ref. No. J-5).
- Change the modes from CUE mode to FWD. Confirm that the RF waveform rises up within two seconds when the mode is changed from CUE mode to FWD.
- 3) Change the modes from REV mode (two seconds or more of REV and to the FWD within five seconds) to FWD. Confirm that the RF waveform rises up within two seconds when the mode is changed from REV mode to FWD.
- 4) Change the modes from STOP mode to FWD. Confirm that the RF waveform rises up within two seconds when the mode is changed from STOP mode to FWD.

5. Exploded Views

NOTE:

- -XX, -X mean standardized parts, so they may have some differences from the original one.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items
- The mechanical parts with no reference number in the exploded views are not supplied.
